Education

University of Toronto — Toronto, ON
Bachelor of Science in Computer Science — *Sept. 2023 – May 2028*

Relevant Coursework: Operating Systems, Data Structures, Algorithms, Parallel Computing, Machine Learning

Experience

Software Engineer Intern — May 2026 – Aug. 2026
Asana — *Vancouver, BC*

- Re-architected Asana's upgrade and checkout funnels, overhauling legacy billing pathways and streamlining conversion flows to drive a projected **$1.5M annual revenue win**.
- Architected a reusable **purchase-flow framework in React/TypeScript**, replacing duplicated eligibility, pricing, and routing logic across multiple product surfaces with a single shared API.
- Built an installable **testing harness in TypeScript**, providing pre-configured mocks to simulate asynchronous payment callbacks and subscription tier transitions across test suites.

AI Engineer Intern (Return Offer) — Sept. 2025 – Dec. 2025
NetNow — *Toronto, ON*

- Architected an enterprise decision-making agent using **LangGraph** and **LangChain**, engineering custom state graphs that reduced decision-making time by **35%**.
- Engineered an automated evaluation pipeline utilizing an **LLM-as-a-judge** pattern to benchmark multi-step agent trajectories, cutting manual review workload by **60%**.
- Deployed a Gemini-based document analysis pipeline on **GCP**, leveraging request batching and prompt caching to reduce latency by **50%** while maintaining **95%+** extraction accuracy.

Software Engineering Intern — May 2025 – Aug. 2025
NetNow — *Toronto, ON*

- Implemented data processing and workflow automation features across **React, Django, and DRF**, reducing application processing time by **80%** across enterprise clients.
- Designed a modular vendor integration framework with reusable APIs and serializers, reducing manual integration effort by **70%** and increasing integration speed by **3x**.
- Rebuilt a dynamic form generation engine to expand supported onboarding workflows by **100%**, standardizing schema validation logic and cutting data entry errors by **40%**.

Projects

ggrpo | *PyTorch, Triton, CUDA, Python, Transformers, Docker*

- Packaged an end-to-end Python library implementing Group Relative Policy Optimization (**GRPO**) in **PyTorch** to fine-tune 1.5B parameter LLMs on code reasoning tasks.
- Authored custom fused **Triton GPU kernels** with online Softmax tiling and activation recomputation, eliminating VRAM materialization of massive $[B, S, V]$ **logits** during rollout.
- Built a custom **autograd Function** validated via **gradcheck** finite-difference tests, alongside a sandboxed subprocess execution environment for safe unit-test reward evaluation.

SDE Canvas | *Next.js, TypeScript, React Flow, Ollama, Docker*

- Built a system design practice platform with a collaborative whiteboard and **LLM-graded test mode**
- Engineered **topology-aware node analysis** by traversing upstream/downstream graph dependencies and injecting the full context chain into the LLM before inference.
- Designed an **agentic architecture generation pipeline** using structured tool-use output to autonomously construct system diagrams from natural language prompts.

Technical Skills

Languages: Python, Java, C++, C, SQL, JavaScript, TypeScript, R, HTML/CSS
Frameworks/Libraries: PyTorch, Triton, CUDA, React, Next.js, Django, DRF, Flask, FastAPI, Node.js, TailwindCSS, Pandas, NumPy, Matplotlib, LangChain, LangGraph, PostgreSQL, MongoDB
Tools & Platforms: Git, GitHub, Postman, Bash, Docker, Kubernetes, AWS, GCP
